Special Issue dedicated to Len Bos
on the occasion of his 70th birthday

Francesco Dell'Accio [a] · Alvise Sommariva [b] · Marco Vianello [b]

This Special Issue of Dolomites Research Notes on Approximation is a tribute to Len Bos's 70th birthday and retirement. Len, a founding figure of the journal, played a pivotal role in shaping its success with his fundamental contributions.

Len has written seminal papers on several topics in approximation theory. Still, it would be reductive to classify him solely as an approximation theorist, given his vast mathematical knowledge and diverse mathematical interests, which is evident to anyone who has known him personally or even glanced at his scientific work. Many of his collaborators and friends are contributors to this issue.

Following Jean-Paul Calvi's profound reflections in the piece at the beginning of this issue, and confident that we speak for many, we sincerely say: "We thank you so much, Len, because we have been working together in the marvelous garden of mathematics".

The Guest Editors

Figure 1: On the left: Len Bos and Jean-Paul Calvi looking at the Dolomites in search for new and higher gardens. On the right: Shayne Waldron, Len Bos and Vilmos Totik in New Zealand.
